

Cost Savings Using Premier SIPs

Cost Comparisons

Homeowners who have built a new home who use SIPs don't turn back. The green, environmental product-features in SIPs are important, but what really makes homeowners happy is that while SIPs are a far superior product, they save real money initially as well as throughout the life of the home.

Comparison to Stick Frame Construction: 2,000 sq. ft. home.	Premier SIPs House (roofs, walls & floors)
Overall Labor Savings	Pre-cut panels arrive to the jobsite ready to install, and can save up to 60% on combined labor on overall framing, trim/millwork, window, door and flooring installations.
HVAC System Reduction	Up to 40% smaller HVAC system
Jobsite Waste Savings	Up to 60% less jobsite framing lumber waste
Construction Quality	Stronger, straighter roofs, walls and floors that don't bow, warp or bend, and reduce builder callbacks by up to 50%.
Framing Material Costs	Premier SIPs arrive to the jobsite pre-cut and pre-insulated. The material cost for Premier SIPs (as compared to traditional stick frame lumber and insulation packages) is only about 5% higher in raw good costs.
End Building/Home Owner Utility Savings	Up to 60% savings on energy bills.

Find out more

Add to these benefits a jump start towards the qualifying points needed for LEED and NAHB GBG certification programs, and we're pretty sure you'll agree that the "Green Factor" of SIPs has brought an innovation that is long over due.
