

SIP Resources for Architects

Product Testing

Full-time staff at Premier's Technical Center regularly tests product properties. From fire ratings to loads to R-values, to specification updates, we provide architects with accurate updates & technical information.

Quality Control

Premier and its suppliers employ third party independent quality assurance agencies to assess and audit the quality control process in our manufacturing facilities. These agencies include PFS Corporation and Underwriters Laboratories.

Load and Design Charts

Premier's Technical Center has spent years developing and updating comprehensive product load and design charts so you can be confident you clearly understand the full product features and requirements.

Code Reports

At the end of the day, it's all about the code reports. We have the most extensive and robust code reports in the SIPs industry. It's our way of providing you with the tools to design and construct buildings with better framing products.

Technical Bulletins

We update our research and testing on a regular basis, so you can be confident that you are using the best practices for the design and installation of Premier SIPs.

Details, Specifications & Information on Premier's Website

Premier's extensive online detail library serves as a one-stop resource where you can get all the details you need to incorporate into your designs.

A current Premier SIPs specification is also available for your regular use.

Design professionals can also use Premier's full library of electronic literature which includes an online architectural binder.

Our featured Architectural Project Gallery is updated regularly. Check back at any time for ideas, and ask us for details about any of the projects you may be interested in learning more about.
