

Superior Products for Your Home

Stronger Straighter Greener

California SIP Homes provides the highest quality products and services for building your new home. Why settle for framing products that aren't as strong, straight or green as Premier SIPs? When you choose Premier SIPs for your home, you are choosing a framing product that will surround your home with roofs, walls, and floors that are:

- Structurally stronger than standard dimensional lumber (up to 30% stronger).
- Straighter floors, walls and roofs that make the construction process faster for your contractor (and that are ideal for hanging artwork when you've moved into your new home).
- Greener products that are made from rapidly renewable and recyclable products, and save you up to 60% on your utility bills.

Think Green

When you choose to build your home with Premier SIPs, you are doing your part to preserve our environment and natural resources. Very few other framing products are considered "environmentally responsible." Here are a few ways that Premier SIPs are green for you as a homeowner:

- Premier SIPs create energy efficient structures, regularly saving you up to 60% every month on your utility bills.
- The energy efficiency helps your home stay cooler in the summer and warmer in the winter without using excessive amounts of natural gas, fuel or electricity.
- Premier SIPs form long walls, roofs and floors with very few gaps. SIPs help preserve the interior air quality of your home, while working to keep harmful pollutants out of your home.
- SIPs structures offer less air infiltration and produce an almost air-tight construction. This allows you to install a smaller HVAC (Heating Ventilation & Air Conditioning) system in your home.
- SIPs are made from 100% recyclable materials.

-
- The wood portion of the panel (the OSB) is made only from rapidly renewable (fast growing) trees. OSB is produced in a way that uses almost the entire part of a tree, so very little wood is wasted.
 - Jobsite framing waste is reduced by up to 60% so you can be confident the framing materials you are selecting are not adding excessive lumber waste to our landfills.

Saving Money

Premier SIPs are a wise investment, both for our environment and for your bank account. Homes built with SIPs offer a significant reduction in utility costs, regularly saving homeowners up to 60% on their utility bills.

- The cost of SIPs is comparable to other dimensional lumber framed homes, but the benefits are far greater.
- Energy Savings (up to 60%)
- Stronger Structures
- Straighter Walls (Fewer wall cracks)
- Greener Features
- Healthier Homes (Better indoor air quality)
- Less Construction Waste

Everyone Loves a Good Warranty

When you build your home with Premier SIPs you're getting both superior framing products AND a sound warranty to back them up.

All Premier SIPs include a hassle-free warranty, so you can be sure you are getting a strong product that is ready to perform for you and your family for years to come.
